Question 51 of 65

Choose 1 option.

Universal Containers (UC) has a private sharing model for Opportunities and uses Opportunity teams. Criteria-based sharing rules are not used. A sales rep at UC leaves the company, and their user record is deactivated. The rep is later rehired in the same role. A Platform Administrator activates the old user record. The user is added to the same default Opportunity teams but is no longer able to see the same records the user worked on before leaving the company.

What is the likely cause?

- ☒ A. The records were manually shared with the user.
- ☐ B. Permission sets were removed when the user was deactivated.
- ☐ C. The stage of the opportunity records was changed to Closed Lost.
- ☐ D. The record type of the opportunity records was changed.

Question 45 of 65

Choose 1 option.

A Platform Administrator created a new prompt template and is testing it. Every time the administrator tests the template, it gives a different response.

Why is the prompt template giving different responses each time it's run?

- ☐ A. Prompt Builder caches the large language model's response, so the prompt is only sent once for every template the administrator creates.
- ☒ B. Every time the administrator runs a prompt template in Prompt Builder, it creates a unique call to the large language model.
- ☐ C. Prompt Builder runs a simulated call to the large language model to save on costs, so the prompt is never sent to the actual model.
- ☐ D. The prompt is only sent to the large language model after the administrator deploys the template to a live agent, not when the prompt is run in the builder.

Choose 1 option.

At Cloud Kicks, sales reps use discounts on the opportunity record to help win sales on particular products. When an opportunity is won, they then have to manually apply the discount to the related opportunity products. The sales manager has asked if there is a way to automate this time-consuming task.

What should a Platform Administrator use to deliver this requirement?

- ☐ A. Approval Process
- ☐ B. Formula Field
- ☐ C. Prebuilt Macro
- ☒ D. Flow Builder

Question 8 of 65

Choose 1 option.

A Platform Administrator at Universal Containers has a screen flow that helps users create new leads. When Lead Source is "Search Engine", the administrator needs to require the user to choose a specific search engine from a picklist. If Lead Source is not "Search Engine", this picklist should be hidden.

What is the most efficient way for the administrator to complete this requirement?

- ☐ A. Configure a picklist for Specific Search Engine, and use a validation rule to conditionally show only when Lead Source is "Search Engine".
- ☐ B. Use Assignment elements; one for when Lead Source is "Search Engine" and one for everything else.
- ☐ C. Use a conditional filter in the screen element to only show the Specific Search Engine field only when Lead Source is "Search Engine".
- ☒ D. Create a picklist for Specific Search Engine, and set conditional visibility so that it is only shown when Lead Source is "Search Engine".
