When installing solar panels, technicians at Ursa Major Solar (UMS) use a liquid sealant to prevent rain and snow from penetrating roofs. To track the inventory and account for costs, the sealant comes in large barrel containers and has been added as a product to the price book. Installation jobs use a very small amount of sealant, so technicians will divide the large barrels into smaller sized containers to avoid having to carry around so much product.

What should the field service administrator consider to keep the inventory levels accurate?

- A. ☐ Utilize unit of measure or quantity on the product required since field service does not recognize both.
- B. ☐ Instruct the technicians to use the original barrel containers since smaller sizes cannot be tracked.
- C. ☒ Create a different product record for each possible size since quantity must be a whole number.
- D. ☐ Ensure the unit of measure on the product and the product required record are the same.

At Ursa Major Solar (UMS), installing solar panels requires three steps. The surface is prepped, the solar panels are installed, and the electronics are installed to connect to the electrical grid. Each step can be completed by different resources and requires different technical skills and parts.

How should UMS make sure the appropriate skills and parts are associated to each installation step?

- A. ☐ Create a different work order and work type for each installation step.
- B. ☐ Create a different work type and work order line item for each step.
- C. ☒ Create a work type associated to the work order and create line items for each step.
- D. ☐ Create a work order hierarchy with the same work type associated to each child work order.
