A large business-to-consumer (B2C) customer is planning to implement Salesforce CRM to become a customer-centric enterprise. Below is the B2C customer's current system landscape diagram.

Current System L

Quoting System

Customer
Database

The goals for implementing Salesforce include:

1. Develop a 360-degree view of the customer.
2. Leverage Salesforce capabilities for marketing, sales, and service processes.
3. Reuse Enterprise capabilities built for quoting and order management processes.

Which three systems from the current system landscape can be retired with the implementation of Salesforce?

◀ ▶

- A. ☒ Email Marketing, Sales Activity, and Case Management
- B. ☐ Order Management, Case Management, and Email Marketing
- C. ☐ Sales Activity, Order Management, and Case Management

A company's cloud-based single-page application consolidates data local to the application with data from on-premise and third-party systems. The diagram below typifies the application's combined use of synchronous and asynchronous calls.

The company wants to use the average response time of its application's user interface as a basis for certain alerts. For this purpose, the following occurs:

1. Log every call start and finish date and time to a central analytics data store.
2. Compute response time uniformly as the difference between the start and finish date and time (A to H in the diagram).

Which computation represents the end-to-end response time from the user's perspective?

- A. ☐ Sum of A to H
- B. ☒ Sum of A and H
- C. ☐ Sum of A to F

Northern Trail Outfitters is planning to perform nightly batch loads into Salesforce from an external system with a custom Java application using the Bulk API. The CIO is curious about monitoring recommendations for the jobs from the technical architect.

Which recommendation should help meet the requirements?

- A. ☐ Write the error response from the Bulk API status to a custom error logging object in Salesforce using an Apex trigger, and create reports on the object.
- B. ☐ Use the `getBatchInfo` method in the Java application to monitor the status of the jobs from the Java application.
- C. ☐ Set the Salesforce debug logs level to "finest", and add the user ID running the job to monitor in the "Debug Logs" in the setup menu.

Northern Trail Outfitters needs to present shipping costs and estimated delivery times to its customers. Shipping services used vary by region and have similar but distinct service request parameters.

Which integration component capability should be used?

- A. ☐ Apex REST Service to implement routing logic to the various shipping service
- B. ☐ Enterprise Service Bus to determine which shipping service to use and transform requests to the necessary format
- C. ☐ Enterprise Service Bus user interface to collect shipper-specific form data

☐ Mark this Item for later review.

What should an integration architect recommend for this integration?

- A. ☐ Use External Services feature to integrate payment gateway to Salesforce to ensure real-time updates to the CSR and support post payment processes.
- B. ☐ Build a custom Apex callout to external payment gateway service and provide a success message to the CSR; the details of callouts and responses are logged for audit purposes.
- C. ☐ Make a callout to the payment gateway through ESB supporting error handling and logging for audit purposes.

☐ Mark this item for later review.

A business-to-consumer (B2C) enterprise customer has the following use case that involves processing payment from an external payment gateway service in Salesforce.

1. Customer requests Customer Service Representative (CSR) for a Service upgrade.
2. Customer provides credit card details to CSR for payment.
3. CSR submits payment information in Salesforce, and it is processed in an external payment gateway.
4. CSR receives confirmation of payment.
5. CSR upgrades service for customer and confirms customer.

This use case requires the CSR to obtain confirmation of payment before upgrading the service. The integration with the payment gateway needs to be reliable and monitored for audit purposes. The payment gateway service is an external RESTful service that the B2C enterprise customer has subscribed for.

What should an integration architect recommend for this integration?

A large enterprise customer has decided to implement Salesforce as its CRM. The current system landscape includes:

1. An Enterprise Resource Planning (ERP) solution that is responsible for Customer invoicing and order fulfillment
2. A Marketing solution used for email campaigns

The enterprise customer needs its sales and service associates to use Salesforce to view and log their interactions with customers and prospects in Salesforce.

Which system should be the system of record for the enterprise customer's customers and prospects?

- A. ☐ New Custom Database for customers and prospects
- B. ☒ Salesforce with relevant Marketing and ERP Information
- C. ☐ ERP with all prospect data from Marketing and Salesforce

When a user clicks "Check Preferences" as part of a Lightning flow in Salesforce, preferences from an externally hosted RESTful service are to be checked in real time. The RESTful service has OpenAPI 2.0 JSON definitions, responding in Boolean and string values data types.

Which integration pattern and mechanism should be selected to meet the conditions?

- A. ☐ Data Virtualization: Salesforce Connect maps external REST data in external objects.
- B. ☐ Remote Call-In: Salesforce REST API with REST Composite Resources.
- C. ☐ Request and Reply: Enhanced External Services invokes a REST API.

☐ Mark this item for later review.

timelines.

5. The legacy system is hosted on-premise and is currently connected to the Enterprise Service Bus (ESB). The ESB is flexible enough to provide any methods and connection types needed by the Salesforce team.
6. There are 1,000 sales reps. Each user processes/creates on average 15 orders per shift. Most of the orders contain 20 to 30 line items.

How should an integration architect integrate the two systems based on the technical requirements and system constraints?

- A. ☐ Use Salesforce custom object, custom REST API, and extract, transform, load (ETL).
- B. ☐ Use Salesforce standard object, REST API, and extract, transform, load (ETL).
- C. ☐ Use Salesforce external object and OData connector.

☐ Mark this item for later review.

A company has an external system that processes and tracks orders. Sales reps manage their leads and opportunity pipeline in Salesforce. In the current state, the two systems are disconnected, and processing orders requires a lot of manual entry on the sales reps' part. This creates delays in processing orders and incomplete data due to manual entry.

As a part of modernization efforts, the company decided to integrate Salesforce and the Order Management System. The following technical requirements were identified:

1. Orders need to be created in real time from Salesforce.
2. Minimal customizations and code should be written due to a tight timeline and lack of developer resources.
3. Sales reps need to be able to see order history and the most up-to-date information on current order status.
4. Managers need to be able to run reports in Salesforce to see daily and monthly order volumes and fulfillment timelines.
5. The legacy system is hosted on-premise and is currently connected to the Enterprise Service Bus (ESB). The ESB is flexible enough to provide any methods and connection

A company that is a leading provider of courses and training delivers courses using third-party trainers. The trainer for the company has to be verified by 10 different training accreditation verification agencies before providing training for the company. Each training accreditation agency has its own response time, which means it could take days to confirm a trainer.

The company decided to automate the trainer accreditation verification process by integrating it with the agency's web services.

What is the recommended approach to automate this process?

- A. ☐ Use middleware to handle the callout to the 10 different verification services; the middleware will handle the business logic of consolidating the verification result from the 10 services. Then, make a call-in to Salesforce and update the verification status to "verified".
- B. ☐ Use Salesforce External Service to make the callout; Salesforce External Service should check the verification agencies until the result is verified. Then, update the trainer status to "verified".
- C. ☐ Make an Apex callout using @future annotation to make the callout to all different agencies; the response should update the trainer status to "verified".

☐ Mark this item for later review.

Northern Trail Outfitters (NTO) wants to improve the quality of callouts from Salesforce to its REST APIs. For this purpose, NTO will require all API clients/consumers to adhere to REST API Markup Language (RAML) specifications that include the field-level definition of every API request and response payload. The RAML specs serve as interface contracts that Apex REST API Clients can rely on.

Which design specification should the integration architect include in the integration architecture to ensure that Apex REST API Clients' unit tests confirm adherence to the RAML specs?

- A. ☐ Require the Apex REST API Clients to implement the `HttpCalloutMock`.
- B. ☐ Call the Apex REST API Clients in a test context to get the mock response.
- C. ☐ Call the `HttpCalloutMock` implementation from the Apex REST API Clients.

A developer has been tasked by the integration architect to build a solution based on the Streaming API. The developer has done some research and has found there are different implementations of the events in Salesforce (PushTopic Events, Change Data Capture, Generic Streaming, Platform Events), but is unsure of how to proceed with the implementation and asks the system architect for some guidance.

What should the architect consider when making the recommendation?

- A. ☐ PushTopic Events can define a custom payload.
- B. ☐ Change Data Capture does not have record access support.
- C. ☐ Change Data Capture can be published from Apex.

☐ Mark this item for later review.

- These eligibility systems can be accessed through APIs orchestrated via ESB (MuleSoft).
- All requests from Salesforce will have to traverse through the customer's API Gateway layer, and the API Gateway imposes a constraint of timing out requests after 9 seconds.

Which recommendation should the integration architect make?

- ◀ ▶
- A. ☐ Recommend synchronous Apex callouts from Lightning UI to External Systems via Mule and implement polling on an API Gateway timeout.
 - B. ☐ Create a platform event in Salesforce via Remote Call-In and use the empAPI in the Lightning UI to serve 3,000 concurrent users when responses are received by Mule.
 - C. ☐ Implement a "Check Update" button that passes a requestID received from ESB (user action needed).

Northern Trail Outfitters (NTO) has recently changed its Corporate Security Guidelines. The guidelines require that all cloud applications pass through a secure firewall before accessing on-premise resources. NTO is evaluating middleware solutions to integrate cloud applications with on-premise resources and services.

Which consideration should an integration architect evaluate before choosing a middleware solution?

- A. ☐ The middleware solution is able to interface directly with databases via an Open Database Connectivity (ODBC) connection string.
- B. ☐ An API Gateway component is deployable behind a Demilitarized Zone (DMZ) or perimeter network.
- C. ☐ The middleware solution enforces the OAuth security protocol.

Northern Trail Outfitters has had an increase in requests from other business units to integrate opportunity information with other systems from Salesforce. The developers have started writing asynchronous @future callouts directly into the target systems. The CIO is concerned about the viability of this approach, scaling for future growth, and has requested a solution recommendation.

What should be done to mitigate the CIO's concerns?

- A. ☐ Implement an extract, transform, load (ETL) tool and perform nightly batch data loads to reduce network traffic using last modified dates on the Opportunity object to extract the right records.
- B. ☐ Refactor the existing @future methods to use Enhanced External Services, import Open API 2.0 schemas, and update flows to use services instead of Apex.
- C. ☐ Implement an Enterprise Service Bus for service orchestration, mediation, routing, and decouple dependencies across systems.

Salesforce Certified Integration Architect

Time Remaining : 01:25:01

42 of 65.

An integration architect has built a solution using REST API, updating Account, Contact, and other related information. The data volumes have increased, resulting in higher API calls consumed, and some days the limits are exceeded. A decision was made to decrease the number of API calls using bulk updates. The customer prefers to continue using REST API to avoid architecture changes.

Which REST API composite resources should the integration architect use to allow up to 200 records in one API call?

- A. ☐ SObject Tree
- B. ☐ Composite
- C. ☐ Batch

An integration architect has designed a mobile application for Salesforce users to get data while on the road using a custom user interface (UI). The application is secured with OAuth and is currently functioning well. There is a new requirement where the mobile application needs to obtain the GPS coordinates and store them on a custom geolocation field.

The geolocation field is secured with field-level security, so users can view the value without changing it.

What should be done to meet the requirement?

- A. ☐ The mobile device makes a REST API inbound call.
- B. ☐ The mobile device receives a REST Apex callout call.
- C. ☐ The mobile device makes a REST Apex inbound call.

☐ Mark this item for later review.

When reviewing occasional special cases, call center agents that use Salesforce have requested access to view the historical case items that relate to submitted cases.

Which mechanism and patterns are recommended to maximize declarative configuration?

- ☐ A. Use an ESB tool with a Data Virtualization pattern, expose the OData endpoint, and then use Salesforce Connect to consume and display the external object along side the Case object.
- ☐ B. Use an ESB tool with a Request and Reply pattern, and then make a real-time Apex callout to the ESB endpoint to fetch and display historical data in a custom Lightning component related to the Case object.
- ☐ C. Use an ESB tool with a Fire and Forget pattern, and then publish a platform event for the requested historical data.

Universal Containers (UC) sales representatives use Sales Cloud as their primary CRM. UC owns a legacy homegrown application that also stores a copy of customer data. Sales representatives may edit or update contact records in Salesforce if there is a change. Both Salesforce and the homegrown application should be kept synchronized for consistency.

UC has the following requirements:

1. When a contact record in Salesforce is updated, the external homegrown application should also be updated.
2. The synchronization should be event-driven.
3. The integration should be asynchronous.

Which option should an architect recommend to satisfy the requirements?

- A. ☐ Leverage Platform Events to publish a custom event message containing changes to the Contact object.
- B. ☒ Use an extract, transform, load (ETL) tool to keep Salesforce and the homegrown application in sync on a regular cadence.
- C. ☐ Leverage Change Data Capture to track changes to the Contact object and write a CometD subscriber on the homegrown application.

A customer imports data from an external system into Salesforce using Bulk API. These jobs have batch sizes of 2,000 and are run in parallel mode. The batches fail frequently with the error "Max CPU time exceeded". A smaller batch size will fix this error.

What should be considered when using a smaller batch size?

- A. ☐ Smaller batch size may exceed the concurrent API request limits.
- B. ☐ Smaller batch size may increase time required to execute bulk jobs.
- C. ☐ Smaller batch size can trigger "Too many concurrent batches" error.

☐ Mark this item for later review.

The goals for implementing Salesforce include:

1. Develop a 360-degree view of the customer.
2. Leverage Salesforce capabilities for marketing, sales, and service processes.
3. Reuse Enterprise capabilities built for quoting and order management processes.

Which three systems from the current system landscape can be retired with the implementation of Salesforce?

- ☐ A. Email Marketing, Sales Activity, and Case Management
- ☐ B. Order Management, Case Management, and Email Marketing
- ☐ C. Sales Activity, Order Management, and Case Management

An architect decided to use Platform Events for integrating Salesforce with an external system for a company.

What should an architect consider when proposing this type of integration mechanism?

- A. ☐ To publish an event, the integration user in Salesforce needs to create permissions on the event entity.
- B. ☐ External system needs to have the same uptime in order to be able to keep up with Salesforce Platform Events.
- C. ☐ Salesforce needs to be able to store information about the external system in order to know which event to send out.

☐ Mark this item for later review.

What should an Integration architect recommend to meet these requirements?

- A. ☐ Implement an API Gateway that all systems of engagement must interface with first.
- B. ☐ Enforce separate security protocols and return formats at the first tier of the API-led architecture.
- C. ☐ Leverage an Identity Provider solution that communicates with the API tiers via SAML.

☐ Mark this item for later review.

Universal Containers (UC) currently owns a middleware tool and has developed an API-led integration architecture with three API tiers:

- The first tier interfaces directly with the systems of engagement.
- The second tier implements business logic and aggregates data.
- The third tier interfaces directly with the systems of record.

Some of the systems of engagement will be a mobile application, a web application, and Salesforce.

UC has a business requirement to return data to the systems of engagement in different formats while also enforcing different security protocols.

What should an integration architect recommend to meet these requirements?

A. ☐ Implement an API Gateway that all systems of

Northern Trail Outfitters wants to use Salesforce as a front end for creating accounts using the lead-to-opportunity process.

1. An order is created in Salesforce when the opportunity is Closed/Won, but the back-end Enterprise Resource Planning (ERP) system is the data master for order.
2. The customer wants to be able to see within Salesforce all the stages of order processing, like Order Created, Order Shipped, and Order Paid, that are within the retention window.

Which message durability consideration should an integration architect make when designing a solution to meet these business requirements?

- A. ☐ When subscribing to Salesforce Event Bus, ReplayID is used with a value of -1 to be able to see new events.
- B. ☐ High-volume event messages are stored for 24 hours (1 day).
- C. ☐ When subscribing to Salesforce Event Bus, ReplayID is used with a value of -2 to be able to

A customer's enterprise architect has identified requirements around caching, queuing, error handling, alerts, retries, event handling, etc. The company has asked the Integration architect to help fulfill such aspects with its Salesforce program.

Which recommendation should the integration architect make?

- A. ☐ Message transformation and protocol translation should be done within Salesforce. Recommend leveraging Salesforce native protocol conversion capabilities as middleware tools are NOT suited for such tasks.
- B. ☐ Transform a Fire and Forget mechanism to Request and Reply, which should be handled by middleware tools (like ETL/ESB) to improve performance.
- C. ☐ Provide true message queuing for integration scenarios (including orchestration, process choreography, quality of service, etc.) given that a middleware solution is required.

Northern Trail Outfitters uses Salesforce to track leads and opportunities, and to capture order details. However, Salesforce isn't the system that holds or processes orders. After the order details are captured in Salesforce, an order must be created in the remote system, which manages the order's lifecycle. The integration architect for the project is recommending a remote system that will subscribe to the platform event defined in Salesforce.

Which integration pattern should be used for this business use case?

- A. ☐ Remote Call-In
- B. ☐ Request and Reply
- C. ☐ Fire and Forget

Universal Containers (UC) is a leading provider of management training globally. UC embarked on a Salesforce transformation journey to allow students to register for courses in the Salesforce Community. UC has a learning system that masters all courses and student registration.

UC requested a near real-time feed of student registration from Salesforce to the learning system. The integration architect recommends using Salesforce Platform Events.

Which API should be used for the Salesforce platform event solution?

- A. ☐ Streaming API
- B. ☐ REST API
- C. ☐ SOAP API

☐ Mark this item for later review.

23 of 65.

Universal Containers (UC) uses Salesforce to track the following customer data:

1. Leads
2. Contacts
3. Accounts
4. Cases

Salesforce is considered to be the system of record for the customer. In addition to Salesforce, customer data exists in an Enterprise Resource Planning (ERP) system, ticketing system, and enterprise data lake. Each of these additional systems have their own unique identifier. UC plans on using middleware to integrate Salesforce with the external systems. UC has a requirement to update the proper external system with record changes in Salesforce and vice versa.

Which solution should an integration architect recommend to handle this requirement?

- A. ☐ Design an MDM solution that maps external IDs to the Salesforce record ID.
- B. ☐ Locally cache external IDs at the middleware layer and design business logic to map updates between systems.
- C. ☐ Use Change Data Capture to update downstream systems accordingly when a record changes.

☐ Mark this item for later review.

A company that is a leading provider of training delivers courses to students globally. The company decided to use Customer Community in order to allow students to log in to the community, register for courses, and pay course fees. The company has a payment gateway that takes more than 30 seconds to process the payment transaction. Students would like to get the payment result in real time so in case an error happens, the students can retry the payment process.

What is the recommended integration approach to process payments based on this requirement?

- A. ☐ Use Platform Events to process payment to the payment gateway.
- B. ☐ Use Continuation to process payment to the payment gateway.
- C. ☐ Use Request and Reply to make an API call to the payment gateway.

☐ Mark this item for later review.

Universal Containers (UC) is a global financial company that sells financial products and services. There is a daily scheduled Batch Apex job that generates invoices from a given set of orders. UC requested building a resilient integration for this Batch Apex job in case the invoice generation fails.

What should an integration architect recommend to fulfill the requirement?

- A. ☐ Build Batch Retry and Error Handling in the Batch Apex job itself.
- B. ☐ Build Batch Retry and Error Handling using BatchApexErrorEvent.
- C. ☐ Build Batch Retry and Error Handling in the middleware.

☐ Mark this item for later review.

20 of 65.

A global financial company sells financial products and services that include:

1. Bank accounts
2. Loans
3. Insurance

The company has a state-of-the-art core banking system that is the master system to store financial transactions, financial products, and customer information. The core banking system currently processes 1 million financial transactions per day. The CTO for the company is considering building a community portal so that customers can review their bank account details, update their information, and review their account financial transactions.

What should an integration architect recommend as a solution to enable customer community users to view their financial transactions?

- A. ☐ Migrate the financial transaction records to a Salesforce custom object and use an extract, transform, and load (ETL) tool to keep systems in sync.
- B. ☐ Use Salesforce Connect to display the financial transactions as an external object.
- C. ☐ Use Iframe to display core banking financial transactions data in the customer community.

☐ Mark this item for later review.

The director of customer service at Northern Trail Outfitters wants to capture and trend specific business events that occur in Salesforce in real time. The metrics will be accessed in an ad-hoc manner using an external analytics system. The events are as follows:

1. A customer initiates a product exchange via a Case.
2. A customer service rep clicks on the "Authorize Exchange Product" menu item in the Case.
3. A customer initiates a subscription cancellation via a Case.
4. A customer service rep clicks on the "Initiate Refund" menu item in the Case.

Which solution should meet these business requirements?

- A. ☐ Case Workflow Rule that sends an Outbound Message
- B. ☐ Case after insert Trigger that executes a callout
- C. ☐ Case Trigger after Insert, after update to publish the platform event

Northern Trail Outfitters is creating a distributable Salesforce package for other Salesforce orgs within the company. The package needs to call into a custom Apex REST endpoint in the central org. The security team wants to ensure a specific integration account is used in the central org that they will authorize after installation of the package.

Which item should an architect recommend to secure the integration in the package?

- A. ☐ Use an encrypted field to store the password that the security team enters, and use password management for external orgs and set the encryption method to TLS 1.2.
- B. ☐ Contact Salesforce Support and create a case to temporarily enable API access for managed packages.
- C. ☐ Create an authentication provider in the package and set the consumer key and consumer secret of the connected app in the central org.

A company needs to be able to send data from Salesforce to a homegrown system behind a corporate firewall. The data needs to be pushed only one way and doesn't need to be sent in real time. The average volume is 2 million records per day.

What should an integration architect consider when choosing the right option in building the integration between the external system and Salesforce?

- A. ☐ Due to high volume of records, the external system will need to use a BULK API Rest endpoint to connect to Salesforce.
- B. ☐ Due to high volume of records, number of concurrent requests can hit the limit for the REST API call to the external system.
- C. ☐ Due to high volume of records, a third-party integration tool is required to stage records off platform.

Universal Containers (UC) is a large printing company that sells advertisement banners. The company works with third-party agents on banner initial design concepts. The design files are stored in an on-premise file store that can be accessed by UC internal users and third-party agencies. UC would like to collaborate with the third-party agencies on the design files and allow them to view the design files in the community. The conceptual design files size is 2.5 GB.

Which solution should an integration architect recommend?

- A. ☐ Use Salesforce Files to link the files to Salesforce records and display the record and the files in the community.
- B. ☒ Create a custom object to store the file location URL; when a community user clicks on the file URL, redirect the user to the on-premise system file location.
- C. ☐ Create a Lightning component with a Request and Reply integration pattern to allow the community users to download the design files.

A large consumer goods manufacturer operating in multiple countries is planning to implement Salesforce for its sales and support operations globally. The manufacturer has the following security requirements:

1. Internal users from each country have to be authenticated with their local active directory.
2. Customers can create their own login or use Google login.
3. Partners have to be authenticated through a central system which is to be determined.
4. Internal users will have access to the central Enterprise Resource Planning (ERP) with their credentials maintained in the ERP system.
5. Additional internal systems will be integrated with Salesforce for sales and support business processes.

Which requirement should the integration architect evaluate while designing the integration needs of this project?

- A. ☐ Evaluate the build of a custom authentication mechanism for users in each country and support for customers and partners.
- B. ☐ Evaluate Salesforce native authentication mechanism for all users including customers and partners.
- C. ☒ Consider a third-party single sign-on (SSO) solution supporting all user authentication including customer and partner.

Universal Containers (UC) is currently managing a custom monolithic web service that runs on an on-premise server. This monolithic web service is responsible for Point-to-Point (P2P) integrations between:

1. Salesforce and a legacy billing application
2. Salesforce and a cloud-based Enterprise Resource Planning (ERP) application
3. Salesforce and a data lake

UC has found that the tight interdependencies between systems are causing integrations to fail.

What should an integration architect recommend to decouple the systems and improve the performance of the integrations?

- A. ☐ Move the custom monolithic web service from on-premise to a cloud provider.
- B. ☒ Leverage modular design by breaking up the web service into smaller pieces for a microservice architecture.
- C. ☐ Use the Salesforce Bulk API when integrating back into Salesforce.
