

Question 1 of 65

Choose 1 option.

A large retail company wants to optimize its customer service operations by using AI to analyze conversational transcripts across all service channels. The goal is to extract common contact reasons, predict customer sentiment, and deliver personalized recommendations to service reps during live interactions.

Which solution should a Service Cloud Consultant use to meet these requirements?

- ☐ A. Enable Omni-Channel and use Service Analytics dashboards to monitor volume and service rep activity across channels in real time.
- ☐ B. Use Einstein Article Recommendations to suggest knowledge articles based on historical case topics, and enable Chat Transcripts for service rep review.
- ☒ C. Use Data Cloud to unify transcript metadata, loyalty, and service data to generate calculated insights and sentiment-based recommendations for service reps and supervisors.

Choose 1 option.

Universal Containers wants to implement several new Agentforce for Service capabilities. A Service Cloud Consultant must assign the following business requirements to identify which one can be fulfilled by using a standard topic, rather than requiring a custom topic and actions.

Which use case could an out-of-the-box AI agent address with no changes to topics?

- ☐ A. Guiding a customer through the process of filing a warranty claim for a damaged shipping container and scheduling an on-site inspection.
- ☐ B. Enabling a customer to check real-time stock levels for a specific container model across multiple distribution centers.
- ☒ C. Answering a question about insurance policy and enabling the customer to open a new support ticket if they have a new issue.
